Go Wireless

Bridge's wireless technology offers uncompromised ease-of-use for wearers with binaural instruments. Program and volume control coupling allows a single touch to control both instruments at once. Sound processing is also synchronized for exceptional performance in binaural hearing.

Rechargeability

With Bridge's optional charging unit, easy listening just got easier. There's no more worry about running out of batteries or losing power at inconvenient times. Similar to charging a mobile phone or other rechargeable electronic device, the hearing instruments are ready to run all day after a six-hour charge. For added convenience, Bridge BTE's are also compatible with standard batteries. In addition, the stylish charger includes a drying function that removes excess moisture from the instruments, improving long-term reliability.

Comfort Technology

Bridge instruments come equipped with features that protect them from even the most active lifestyle.

Bridge's comfort technology includes:

SoundSmoothing®

Quickly softens occasional, sudden impulsive sounds like rustling paper, clanging dishes, and breaking glass.

WindNoise Cancellation

Provided to detect and reduce wind noise that can be bothersome with other hearing instruments.

Multi-Channel Adaptive Directional Microphone

Provides top quality technology available to help you hear speech more clearly in situations where many people are talking at once. Directional microphones are proven to enhance clarity in the most challenging environments for anyone with hearing loss.

DataLogging

Provides a running record of your daily listening activities and instrument use. Your Hearing Health Professional can more quickly and easily personalize your Bridge instruments and reduce the number of follow-up fitting office visits.

NanoCoating

Available on Bridge's BTE cases, NanoCoating repels water, dirt, and oils before they can penetrate the hearing instruments.

Hands Free, Automatic Adjustments

Bridge's technologies are automatically managed by intelligent Automatic Situation Detection which continuously analyzes the listening environment and automatically engages the right features. Whether you're enjoying a birthday celebration, doing yard work on a windy day, or just watching a movie, Bridge hearing instruments have less need for manual adjustments and therefore do the work for you.

Blu RCU: The Remote Control with All of the Answers

The cutting-edge technology of Bridge's Bluetooth wireless connectivity will transform the way you hear the sounds of life. The optional Blu RCU not only controls hearing instrument functions, but also allows Bridge hearing instruments to stream high-quality, stereo sound from many popular audio devices such as TVs, mobile phones, MP3 players, and more.

- Mobile phone calls have never been easier with Bridge and Blu RCU. Just a press of a button allows you to hear the mobile phone signal in both ears while keeping surrounding background noise to a minimum.
- Watching TV and movies at home can be fun again. Blu RCU streams stereo sound to your Bridge instruments with no delay. There's no need to worry about the TV volume being too loud for others. Simply set the TV volume at a reasonable level and use your Blu RCU to provide personalized volume and sound just for you.
- Blu RCU can also be used to stream sound from PCs or MP3 players for your favorite music.
